STELLAR

FUNGICIDE

ACTIVE CONSTITUENT: 250 g/L AZOXYSTROBIN

Surefire STELLAR fungicide, containing 250g/L Azoxystrobin, is now registered for use in the control of many diseases of avocados, grapes, mangoes, passionfruit, cucurbits, poppies, potatoes and tomatoes.

TYPICAL APPLICATIONS:

Avocados:

For control of stem end rot, apply at a rate of 80ml / 100L water as part of a preventative fungicide program containing fungicides from different chemical groups.

Grapes:

For control of Powdery & Downy Mildew, apply at 75-100ml / 100L water in 2 or 3 consecutive applications at 10-16 day intervals at any time between early shoot growth and to within 14 days of harvest.

Tomatoes:

Surefire Stellar controls blight, applied at between 400-600 ml/ha, mixed with sufficient water to achieve thorough coverage of all foliage.

Mangoes:

Stem end rot is controlled with an application of SureFire Stellar at 80ml / 100L water .

Potatoes:

Black & silver scurf are controlled by in-furrow spray at planting, 5-10 ml/ 100m of row.

Container sizes:	Carton quantity:
1 litre	5
5 litre	4
