INSECTICIDE
240 g/L METHOXYFENOZIDE

©SureFire ENIGMA 240SC is an insect growth regulator which interferes with the normal growth and development of many insects, and also inhibits their feeding.

Enigma 240SC features control of light-brown apple moth & other lepidopteran pests on apples, pears, avocado, eggplant, lychee, macadamia and tomatoes (full claims on the label).

Enigma 240SC is very suitable for use in IPM programs in orchards and vineyards. It may be applied onto plants at any time of the year, and it has the benefit of being a low hazard to foraging bees.

Especially effective for control of larvae and eggs. It is safe to beneficial insects and mites, while still working as contact killing of label insects and root absorption.

Enigma 240SC is a non-scheduled product, and it is suitable for use in resistance management rotation. It is not degraded by ultraviolet light, and will provide 2 to 3 weeks of residual activity when applied as per directions.

Crop withholding periods are in the range of 1 day to 28 days depending on the crop. Refer to the label for complete information there, as well as for livestock grazing considerations.
